Gestational diabetes is a temporary form of diabetes that occurs during pregnancy. Between three and 20 per cent of pregnant women develop gestational diabetes, depending on their risk factors. A diagnosis of gestational diabetes may increase the risk of developing diabetes later in life for both mother and child.

What is diabetes? - Diabetes Canada

Diabetic ketoacidosis (DKA) is a cardinal feature of type 1 diabetes. However, there is a strong, almost dogmatic, errant perception by physicians that DKA is a complication that only occurs in patients with type 1 diabetes. This is not true. DKA does occur in type 2 diabetes; however, it rarely occurs in the absence of a precipitating event. ### Case 1 R.T., a 25-year-old African-American man ...
