Gravity (from Latin *gravitas* 'weight'), or gravitation, is a natural phenomenon by which all things with mass or energy—including planets, stars, galaxies, and even light —are attracted to (or gravitate toward) one another. On Earth, gravity gives weight to physical objects, and the Moon's gravity causes the tides of the oceans. The gravitational attraction of the original gaseous matter ...

In physics, a field is a physical quantity, represented by a number or another tensor, that has a value for each point in space and time. For example, on a weather map, the surface temperature is described by assigning a number to each point on the map; the temperature can be considered at a certain point in time or over some interval of time, to study the dynamics of temperature change.

A gravidade é uma das quatro forças fundamentais da natureza, em conjunto com o eletromagnetismo, a força nuclear fraca e a força nuclear forte. [1] Na física moderna, a descrição mais precisa da gravidade é dada pela teoria geral da relatividade de Einstein, segundo a qual o fenómeno é uma consequência da curvatura espaço-tempo que regula o movimento de objetos inertes.
