A plasma display panel (PDP) is a type of flat panel display that uses small cells containing plasma: ionized gas that responds to electric fields.Plasma TVs were the first large (over 32 inches diagonal) flat panel displays to be released to the public. Until about 2007, plasma displays were commonly used in large televisions (30 inches (76 cm) and larger).

Last night, observing a friend's Sony VAI/O connected to a 42" Panasonic Viera 720p plasma display via the HDMI input, the screen was not displayed properly, with a significant portion bleeding out of the boundaries of the screen. It was cut off about 5% on every side, like it was zoomed in. Asked her about how she feels about it and

A limited number of the vendor's M8 and R8 LCD televisions and its Q9 Plasma televisions were found to drop out intermittently while viewing digital free-to-air channels. Well if we go with these numbers (all we have, at the moment), and you watch 5 hours of TV every day, a plasma will reach half brightness in around 54 years.
