Pattern Recognition: A Statistical Approach

Pattern recognition is the automated recognition of patterns and regularities in data. It has applications in statistical data analysis, signal processing, image analysis, information retrieval, bioinformatics, data compression, computer graphics and machine learning. Pattern recognition has its origins in statistics and engineering; some modern approaches to pattern recognition include the use of machine learning, due to the increased availability of big data and a new abundance of processing p

Pattern Recognition A Statistical Approach [EBOOK]

A Statistical Approach to Neural Networks for Pattern Recognition presents a statistical treatment of the Multilayer Perceptron (MLP), which is the most widely used of the neural network models. This book aims to answer questions that arise when statisticians are first confronted with this type of model, such as:

Search Tips. Phrase Searching You can use double quotes to search for a series of words in a particular order. For example, "World war II" (with quotes) will give more precise results than World war II (without quotes). Wildcard Searching If you want to search for multiple variations of a word, you can substitute a special symbol (called a "wildcard") for one or more letters.

Statistical pattern recognition: a review - IEEE Journals ...

Pattern recognition is a scientific discipline, which is concerned with the development of systems that help in the classification of objects into a number of classes or categories. These systems use prior knowledge or statistical information from the data and learn to solve a given problem.

Pattern Recognition - an overview | ScienceDirect Topics

Statistical pattern recognition is concerned with the problem of designing machines that can classify complex patterns. Although statistical pattern recognition is typically viewed as a branch of Artificial Intelligence, such problems frequently arise in the social and behavioral sciences in the course of detecting complex structural relationships in large data sets.
