In the United States, large commercial production is primarily in the South Plains of West Texas, and in eastern New Mexico near and south of Portales, but they are grown on a small scale elsewhere in the South as the best-flavored and preferred type for boiled peanuts. They are comparatively tall, reaching a height of 125 cm (49 in) and a spread of 75 cm (30 in).

Peanut - Wikipedia

Texas is the second-largest peanut-producing state in the U. S., producing approximately 20% of the nation's peanut crop on more than 350,000 planted acres. Peanut production has a significant benefit to the Texas economy, with an annual crop value of \$150 million, and an overall economic benefit of approximately \$1 billion.

Peanut | SoilCrop.tamu.edu

Soils best suited to peanut production are well-drained, light-colored, loose, friable sandy loams with topsoil depths of 1.5 to 2.0 feet that contain high levels of calcium and a moderate amount of organic matter. These soils allow for easy penetration of roots and pegs, fewer disease problems, and easier harvesting.

NMSU: New Mexico Peanut Production

Texas peanut farmers were busy the last few weeks of October trying to get their crops harvested before the cold weather arrived. They were forecast to plant around 185,000 acres of peanuts this year, according to Nutt. She noted Texas is the only state in the nation that can grow all four types of peanuts.
